

Open up your horizons

with an ASS 39 PD.NI panoramic sliding door from Schueco

Exceptional quality, exceptional value

The Schueco ASS 39 PD.NI provides the clearest view

A flush threshold allows easy access

A fresh choice

Schueco is a new name in Australia, but we've actually had more than sixty years' experience of designing aluminium door and window systems for homes all over the world.

The Schueco ASS 39 PD.NI is a product of that experience. It's an uninsulated panoramic sliding door with a frame that is completely concealed on all four sides, allowing you to enjoy the clearest possible views.

Manually operated, its quality is unbeatable, its sliding action is always smooth and in terms of value for money, it's in a class of its own.

Innovative design

The Schueco ASS 39 PD.NI includes a track whose rollers are integrated into the sill profile, enabling the threshold to be completely flush. Result? Minimal danger of tripping and a seamless transition between indoor and outdoor living.

Another innovation is a removable roller profile to facilitate cleaning. And there's a whole range of colours and finishes to ensure that the door blends perfectly with the décor of your home.

Concealed outer frames and slim profiles add style and elegance to any home

Unique 90° free-standing corner opens up new design possibilities

Designed to last

Every aspect of the Schueco ASS 39 PD.NI reflects the care taken over its design. An integrated retaining catch and a robust locking mechanism ensure that security is never an issue.

There is also a 90° free-standing corner opening option that delivers maximum freedom of movement with a new level of style.

If you're looking for total quality in both design and performance, Schueco is the name that can deliver.

A door that meets all design needs

Wide range of opening configurations provides maximum choice

Real flexibility

The Schueco ASS 39 PD.NI can accommodate very wide openings. Its sashes can be 3.5 m high floor-to-ceiling, 2.3 m wide and up to 300 kg in weight.

Depending upon the number of sashes (up to a maximum of six), it can be configured to run on double or triple tracks, subject to wind design pressures.

There is a choice of glass thicknesses (up to 32 mm).

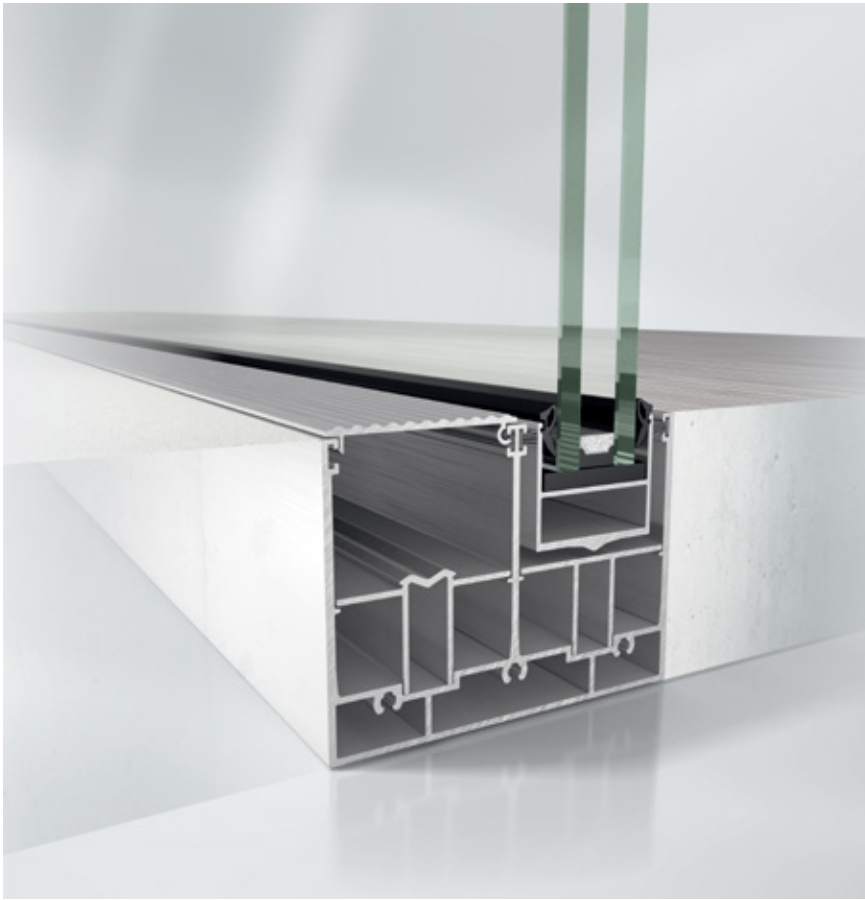

The aluminium profiles are slender but strong and to ensure maximum light penetration, the central meeting stile is only 37.5 mm wide.

Experience counts

The clean, contemporary lines of the Schueco ASS 39 PD.NI make it ideal for inclusion in many different types of property.

And Schueco's unrivalled experience in the design and supply of aluminium systems for the whole building envelope makes it a door that can be specified with complete confidence.

German engineering perfected for Australia

Precision engineering ensures trouble-free performance

Built to last

The Schueco ASS 39 PD.NI isn't simply a beautiful door, it's a fine piece of German engineering too. Which means that it's going to go on adding value year in, year out.

Its superior quality is immediately discernible from the rigidity of its profiles and the lack of flexing when the door is opened and closed.

Yet it is also highly affordable, meaning that for the first time for many years, designers, contractors and homeowners in Australia have a real choice when specifying a sliding-door system.

Find out more

Schueco ASS 39 PD.NI Panoramic Sliding Door System

Schueco's ASS 39 PD.NI non-insulated panoramic sliding door is part of a comprehensive range of sustainable aluminium systems developed by Schueco to address the needs of the whole building envelope.

The range includes many types of folding- and sliding-door systems which together offer highly flexible, thermally insulated and non-insulated door solutions for use throughout the residential and commercial sectors.

When installed externally, Schueco sliding doors can accommodate almost any opening, while internally they can be employed as stylish room-dividers. However they are used, they are sure to add style with levels of thermal and acoustic performance to match.
